

Fund Characteristics

The USD CONVERGENCE Bond follows on the successful performance of Euram's Euro denominated Euroopportunity Bond with a similar philosophy that focuses on a USD basis.

As a so called Convergence-Bond-Fund, it invests in bonds of EU accession countries or those aspiring to accession and Eastern European and CIS bonds, predominantly in bonds denominated in USD or – given excellent macroeconomic fundamentals – directly in the local currency. Characteristically, the fund takes advantage of yield enhancements of various Government and Corporate borrowers against Treasuries and German or Austrian government bonds. We take utmost care regarding the quality of the debtor with respect to his yield enhancement.

The most important principle is to evaluate the debtor quality first (in general only a limited part of investments below Investment-Grade and then only when perspectives have shown dramatic improvements in the near past and/or a rating-upgrade is expected) to achieve a long-term outperformance against the EFFAS-USD-Govt Index.

Fund Manager's Comment

At the moment bonds show risk premiums according to the economic development; this applies to corporate bonds as well as to government bonds. Potential key interest rate reductions from the central banks will presumably be dependent on the development of the inflation rate and the economic growth.

Supported by central banks and the actual yield levels we expect business activity to rise again. Given the companies' mostly comfortable liquidity situation we don't expect more bond issues, thus resulting in a favorable price development.

The yield on the 10 Year Bond is at a level of 4,5%.
